

# MUSKAN GYANANI

AI-Native Full-Stack Engineer · Agentic AI & Automation · React / Node.js

Jaipur, India | +91 93526 64395 | [muskaann.129@gmail.com](mailto:muskaann.129@gmail.com) | [linkedin.com/in/muskangyanani](https://linkedin.com/in/muskangyanani) | [github.com/muskangyanani](https://github.com/muskangyanani)

## SUMMARY

A Gen-Z engineer who builds at the speed the industry is moving — shipping production features weekly at a fast-moving SaaS startup while exploring new AI tooling every day. I build modern, AI-powered products with React and Node.js — and I work *with* AI as a force multiplier, using Claude Code and LLMs to move fast while keeping code clean. My focus isn't just writing code; it's understanding the problem, finding the optimal solution, handling every edge case, and doing thorough impact analysis before shipping at scale. Strong CS fundamentals, a builder's mindset, and a habit of turning ambiguous business needs into reliable software.

## EXPERIENCE

### Junior Software Engineer — Snapto (RedLava LLP)

2025 – Present

*Multi-tenant WhatsApp automation & AI SaaS platform*

- ▶ Ship production features on a near-weekly cadence across the React frontend, WhatsApp automation workflows, and Node.js backend services for live business customers.
- ▶ Design and build client-facing AI chatbots — including GPT-powered conversational flows with Google Sheets integrations — turning complex, business-specific requirements into working automation pipelines.
- ▶ Own custom automation builds for multiple businesses on the platform: lead capture, customer support, and order workflows over the WhatsApp Business API.
- ▶ Develop and optimize OpenAI API integrations that form a core part of the product, improving response quality and reliability.
- ▶ Use Claude Code as a daily engineering multiplier — directing it to implement, refactor, and debug — while I concentrate on logic, optimal design, edge-case coverage, and impact analysis across the codebase.
- ▶ Improve code quality and resolve cross-cutting bugs to keep the platform scalable as the customer base grows.

### Full-Stack Developer Intern — Snapto (RedLava LLP)

Jun – Aug 2025

- ▶ Built the company website in Next.js and Tailwind CSS with a responsive, modern UI.
- ▶ Built a content pipeline that scrapes website content, converts it to PDFs, and stores it in OpenAI vector databases to train custom AI agents (RAG).
- ▶ Delivered high-impact React component work and frontend stability fixes — earning a full-time offer as Junior Software Engineer.

## TECHNICAL SKILLS

**Languages & CS:** JavaScript, Python, SQL · Data Structures, Algorithms, Problem Solving, System Design fundamentals

**Frontend:** React.js, Next.js, Tailwind CSS, Responsive UI, State Management

**Backend & Data:** Node.js, Express.js, REST APIs, MySQL, MongoDB

**AI Engineering:** OpenAI API, LLM Integrations, RAG, Vector Databases, AI Agents & Tool Calling, MCP (Model Context Protocol), Prompt Engineering

**AI-Augmented Dev:** Claude Code (advanced daily use), AI-assisted refactoring, debugging & impact analysis

**Automation:** WhatsApp Business API, Chatbot Development, Workflow Automation, Google Sheets Integration

**Tools & Cloud:** Git, GitHub, Linux, Postman, Google Cloud Console

## EDUCATION

**B.Tech, Computer Science** — Poornima Institute of Engineering & Technology, Jaipur

2022 – 2026

CGPA: 8.75 / 10

## LEADERSHIP & ACHIEVEMENTS

- ▶ **Captain, Coding Club — PIET (2023–24):** Led 50+ members; ran workshops, hackathons and contests; grew participation 40% through new engagement formats.
- ▶ **Vice Captain, Coding Club — PIET (2022–23):** Organized coding bootcamps and competitive-programming events on emerging tech.
- ▶ **2nd place, UDHBHAV Software Project Exhibition** (Dynamic Portfolio).
- ▶ **Hackathons:** LNMHacks 6.0, LNMHacks 5.0 (Web3). **Certifications:** HackerRank Python, LinkedIn JavaScript.
